

MISTRAL AI

# Sovereign AI in Action

# Banking Secrecy at Scale

## BNP Paribas Challenge and Solution

### The Challenge

Automating document processing for **190,000 employees** presented a formidable challenge. The bank needed to ensure that sensitive data remained secure and did not leave the bank's perimeter, while still improving efficiency through automation.

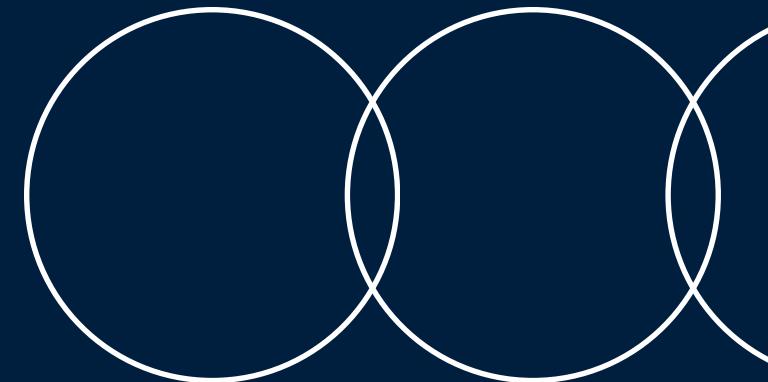

### The Solution

By deploying Mistral models within a **private internal 'LLM-as-a-Service' hub**, BNP Paribas effectively addressed these concerns. This approach enables secure processing of documents without exposing data via public APIs, maintaining strict compliance with banking regulations.

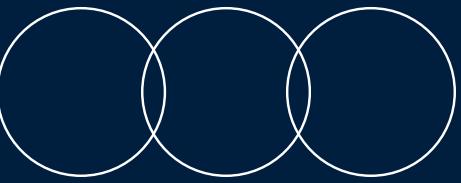

# Efficiency without Compromise

## Impact on BNP Paribas

BNP Paribas has successfully implemented **over 100 production use cases** globally, leading to significant reductions in manual data entry, enhanced compliance, and complete control over model updates within their secure infrastructure.

# Protecting Intellectual Property

## Solutions for Stellantis Challenge

### Blueprint Search Security

Stellantis faced the challenge of enabling **8,000+ engineers** to seamlessly search complex blueprints while maintaining the integrity and confidentiality of their intellectual property. By implementing a private Retrieval-Augmented Generation (RAG) system, they ensured secure access to information without risking IP exposure.

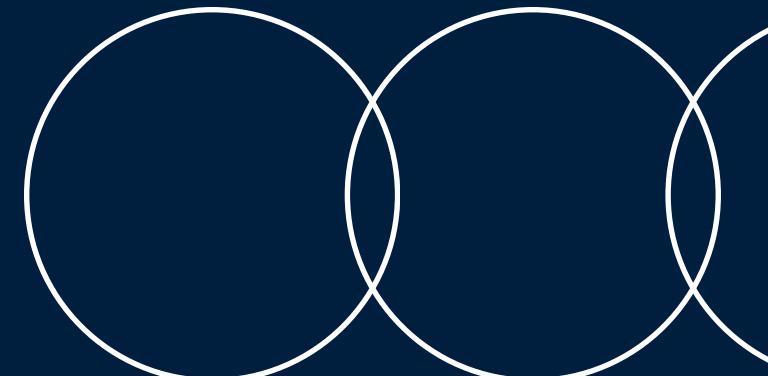

### On-Premise Solution

The Mistral-powered RAG system is hosted on-premise or in a private cloud environment. This approach not only enhances security but also provides Stellantis with complete control over data access, fostering a culture of innovation without compromising sensitive information.

# Accelerated Innovation

## Transforming Automotive Efficiency

Stellantis has achieved a **remarkable reduction** in the time required to find technical information, enabling unified intelligence across 14 brands, and leveraging high-performance localized GPU clusters for enhanced productivity.
